SUMMARY

CSE graduate with hands-on experience in SQL, Python, Tableau, and Excel for data analysis. Completed end-to-end projects involving data modeling, customer segmentation, and dynamic dashboard building. Looking to apply data-driven thinking to help businesses make faster, smarter decisions.

TECHNICAL SKILLS

Languages & BI Tools: Python , SQL (PostgreSQL, MySQL , Azure SQL) ,dbt (Data build tool), Tableau

Cloud Infrastructure: Microsoft Azure, Azure Data Factory (ETL/Pipeline Orchestration)

Pipelines & Tools: ETL pipelines , ELT pipelines, YAML config based pipelines , Version Control

PROJECTS

Corporate Revenue Leakage & Discount Audit Dashboard

GitHub | Tableau Dashboard

- **Accomplished multi-dimensional data analysis** of corporate profit erosion across a TPC-H dataset (1.5M orders, 100K customers), processing over **229 Billion in gross transactions** across 27 quarters, by designing 17 complex derived tables within a custom PostgreSQL schema.
- **Isolated 11.48 Billion in discount leakage** and quantified pricing anomalies across 200K products and 5 market segments, by conducting a dual-axis "Financial Tug-of-War" demand elasticity trend analysis across 11 distinct discount levels (0–10%).
- **Streamlined corporate financial auditing** and automated margin erosion tracking for executive stakeholders, by building an interactive Tableau dashboard mapping operational leakage flags down to 1,000 individual clerk levels to optimize urgent order discounting.

Customer Revenue Health

GitHub | Tableau Dashboard

- **Optimized data integrity for 100K e-commerce orders**, eliminating 261K duplicate rows (26% of geolocation data) across 738K records with zero data loss, by architecting a Python, pandas, and SQLAlchemy pipeline to clean and ingest 9 raw CSV files into PostgreSQL.
- **Formulated 6 critical customer health metrics** (CRR, RPR, LTV, Churn, CSAT, NPS), calibrating a realistic +35 NPS over a naive -100 bias, by programming advanced SQL window functions, cohort pivot queries, and text-timestamp casting logic.
- **Identified a critical >70% first-30-day customer churn gap** and low 8% repeat purchase rate, pinpointing regional logistics bottlenecks (**29+ days shipping in Roraima/Amapá vs. 8 days in São Paulo**), by analyzing end-to-end order delivery lifecycles.
- **Translated complex e-commerce behaviors into strategic post-purchase interventions**, designing a 4-page interactive Tableau Public dashboard (cohort heatmaps and geographic performance) to drive a high-ROI 7-day email nudge strategy.

Mapping Crime Trends in Los Angeles

GitHub | Tableau Dashboard

- **Optimized data integrity for 3.1M+ historical LAPD records**, standardizing 26 disparate metrics and resolving data gaps across 1.4M weapon entries and 1.8M cross-streets, by architecting an end-to-end SQL cleaning pipeline that transformed raw integers into standardized temporal features.
- **Uncovered a massive 68.8% crime surge and critical case resolution disparities**—revealing that 38% of incidents cluster on Friday evenings and property crimes drop to a near-unsolved 1.07% clearance rate—by engineering an interactive multi-page Tableau dashboard.

EDUCATION

Vellore Institute of Technology

Bachelor of Technology in Computer Science (*Final Year , CGPA - 7.8*)

Bhopal
2022–2026

ACHIEVEMENTS

Research Publications

"Deep Learning-Based Approaches for Efficient Brain MRI Segmentation: A Comprehensive Analysis," IEEE STCR 2025, pp. 1-9, doi: 10.1109/STCR62650.2025.11020327.

- Aggregated MRI datasets across multiple hospital sources and benchmarked U-Net, ResNet, and transformer-based architectures for brain MRI segmentation across accuracy, computational efficiency, and clinical applicability in resource-constrained environments.

Open Source Contributions

Contributor | GirlScript Summer of Code (GSSoC) 2026

- Contributed to open-source data engineering and python-based repositories, optimizing workflows and resolving critical bugs during the 3-month coding program.
